

Building an Ankylosaur dinosaur

Follow the instructions in the boxes below to build your own Ankylosaur dinosaur. It is best to colour it in before you actually fold it into the correct shape.

The bold lines show where you must cut. The broken lines show where you must fold.

Before folding, score along the broken lines, using a pair of blunted scissors. Then carefully follow the step-by-step instructions. You will not need to use any glue.

When you have built your model, colour it in using paints or felt tips.

ANKYLOSAUR

1. Push flap A through slot A.
2. Push flap B through slot B.
3. Push back head and tail along the folds.
